

Jean Souza

Senior Front-End Engineer | React · Next.js · TypeScript

contato@jeansouza.dev | +55 34 991949299 | linkedin.com/in/jeancosouza | github.com/jeancarlos | jeansouza.dev

Professional Summary

15+ years building production-grade web interfaces — from the jQuery era through React 19 and Next.js 16 App Router, including React Server Components and Server Actions at scale. I've shipped micro-frontend architectures, design systems, and an open source library across healthtech, e-commerce, and telecom, deploying to Vercel and cloud providers with CI/CD pipelines backed by Jest, React Testing Library, and Playwright E2E — helping teams reach 92% test coverage and TDD as standard practice. What sets me apart from most front-end engineers: I operate a production homelab with 50+ Docker containers, blue/green deployments, and extensive Python automation — three years of continuous, zero-downtime operation. AI tooling (Claude Code, Windsurf, Codex) is part of my daily workflow, not an experiment. C2 English — EF SET 82/100.

Technical Skills

Frontend Core: React 19, Next.js 16, TypeScript, React Server Components, Server Actions, ES6+, HTML5, CSS3, Tailwind CSS v4, Framer Motion, Radix UI, shadcn/ui, React Native, Vue.js

State & Data: Redux, Zustand, React Query (TanStack), Context API, Zod, REST APIs

Architecture: Micro-frontends, Design Systems, Web Components (Lit), SSR/SSG/ISR, Core Web Vitals optimization, monorepo

Testing: Jest, Vitest, Playwright, React Testing Library, TDD, 92% test coverage

DevOps/Tooling: Docker, Vercel, GitHub Actions, CI/CD, Vite, Storybook, ESLint, Conventional Commits, Git Flow, Figma handoff

Backend (support): Node.js, Express, Prisma ORM, PostgreSQL, NextAuth v5, Puppeteer

Accessibility: WCAG 2.1 AA, screen reader testing, keyboard navigation

Experience

Zydon · Senior Front-End Engineer

October 2024 – March 2026 · Uberlândia, Brazil

Zydon is a Brazilian SaaS company. Jean joined as the sole front-end tech lead, establishing engineering standards across a multi-repo micro-frontend ecosystem.

- Built the testing suite from scratch across a multi-repo micro-frontend environment — 70% total coverage where none had existed before, with Playwright E2E integrated into CI for critical user flows validated on every pull request
- Cut CI build time from 1 hour to 20 minutes (67% reduction) through pipeline optimization and observability instrumentation with log and metric tooling
- Drove bug regression rate down from ~25% to below 5% through standardized code reviews, automated CI validation on pull requests, and Zod schema validation at API boundaries
- Executed critical state management refactoring using Redux and Next.js 16 App Router — leveraging React Server Components, Server Actions, and per-route SSR/SSG strategy — lowering client-side memory footprint and improving Core Web Vitals on the main portal
- Modeled and decoupled micro-frontends within a multi-repository ecosystem, establishing agnostic communication contracts and securing total deployment autonomy for multiple product squads; mentoring engineers on architecture decisions and review standards

Skills: React 19, Next.js 16, TypeScript, Redux, Playwright, Zod, CI/CD, micro-frontends, code review, Figma

Mutant · Senior Front-End Engineer (TypeScript)

January 2024 – August 2024 · São Paulo, Brazil

Mutant is a Brazilian digital transformation consultancy; this engagement was for Vivo, one of Brazil's largest telecom operators.

- Led the team in building a Web Components library (Lit) for Vivo — fully interoperable across Angular and React in a micro-frontend architecture, eliminating per-framework rewrites and reducing integration overhead for all consuming squads
- Shipped 100% of components WCAG 2.1 AA-compliant, making the entire library accessible to assistive technologies and reducing the client's legal exposure
- Architected the component library for full framework agnosticism — components integrated transparently from React to Angular without per-framework rewrites, based on deep internals knowledge of both libraries.
- Delivered Storybook documentation for the Vivo component library — interactive catalog used as the primary reference by both design and engineering teams, replacing informal ad-hoc discovery.

Skills: Web Components, Lit, TypeScript, Storybook, accessibility, WCAG, micro-frontends, Vite, Figma, design system

Runrun.it · Senior Front-End Engineer (React)

August 2022 – October 2023 · São Paulo, Brazil

Runrun.it is a Brazilian project management SaaS serving mid-market and enterprise teams; Jean joined to modernize a legacy Backbone/Marionette codebase.

- Built the bulk-actions tool adopted across multiple critical product flows using React and custom hooks — hooks abstracted the legacy Backbone integration so new engineers could ship without learning the old stack
- Migrated Backbone + Marionette modules to React: faster onboarding, lower maintenance cost, more sustainable architecture; led mentoring sessions to accelerate new hires' ramp-up
- Code quality standards (ESLint, code review guidelines, hook architecture) retained by the team after the engagement — evidence of lasting process impact.
- Adopted React Query (TanStack) for server-state management — replaced manual fetch logic with declarative data fetching, reducing boilerplate and improving cache consistency across features

Skills: React, TypeScript, React Query, hooks, ESLint, code review, mentoring, React migration, Figma

Luizalabs · Senior Front-End Engineer (React/TypeScript)

January 2020 – June 2022 · Uberlândia, Brazil

Luizalabs is the engineering division of Magalu, Brazil's largest retailer — one of the most demanding e-commerce engineering environments in the country.

- Collaboratively led the team to achieve 92% test coverage with Jest + React Testing Library on the main project — the milestone that unlocked the company's continuous delivery pipeline and became an internal quality benchmark
- Architected and integrated high-scale micro-frontend applications into Magalu's unified platform, establishing client-side orchestration standards, secure state sharing, and automated release workflows via Git Flow and Conventional Commits
- Introduced unit tests and an automated deployment pipeline to a legacy project with zero prior coverage, shrinking release times from 2 days (manual) to just 1 hour with zero regressions
- Standardized server-state data fetching with React Query (TanStack) — unified cache strategy and reduced duplicated async logic across the main Magalu application

Skills: React, TypeScript, Jest, React Testing Library, TDD, micro-frontends, React Query, CI/CD, Git Flow, Figma

Vitta · Full-Stack Engineer (Vue/TypeScript/Node)

August 2017 – January 2020 · Uberlândia, Brazil

Vitta is a Brazilian healthtech company offering clinical management SaaS for hospitals and clinics.

- Created and led Vi-Ui, an open source Vue component library documented with Storybook — the foundation the company's design system was built on, reducing UI inconsistency across all applications
- Built a Node + Express + Puppeteer microservice to centralize printable document generation across the platform — used in 100% of clinical workflows by doctors and patients

- Delivered a Node + TypeScript API for medical record retrieval in compliance with Brazil's LGPD (GDPR equivalent), ensuring data privacy protections were in place ahead of enforcement
- Optimized complex relational queries in PostgreSQL for the clinical microservice, reducing route response latency by up to 30%
- Implemented SSR in Vue and structured data on Vitta's corporate portal, improving Core Web Vitals and driving a substantial increase in organic traffic

Skills: Vue.js, TypeScript, Node.js, PostgreSQL, Puppeteer, design system, Storybook, WCAG, SSR, LGPD

LuxControl Automação Residencial · Senior Front-End Engineer

April 2012 – July 2017 · Uberlândia, Brazil

LuxControl is a Brazilian home automation company; Jean led front-end for a 5-year embedded system project in an air-gapped, high-constraint environment.

- Led 5 years of front-end development for an embedded home automation system — air-gapped environment, strict performance constraints, no room for deployment mistakes
- Maintained full WCAG compliance throughout the product, accessible to all user profiles regardless of assistive device
- Introduced React and REST API consumption to a legacy jQuery system with active users in production — zero-downtime migration with no customer-facing disruption.
- Engineered a custom client-side caching mechanism to mitigate network latency within the air-gapped hardware, improving perceived performance without any server-side changes
- Optimized LuxControl's corporate website for SEO and Core Web Vitals (LCP, FID, CLS), boosting Google Lighthouse scores from below 70 to above 95 and expanding the brand's digital presence.

Skills: React, REST APIs, WCAG, accessibility, Core Web Vitals, performance optimization, embedded systems

Production Homelab

3 years of continuous operation · 99.9% uptime

- 50+ Docker containers across independent stacks managed with Docker Compose; Traefik reverse proxy with automated HTTPS and per-service authentication
 - Blue/green deployment with zero-downtime releases for a Next.js 16 app in production; Cloudflare Tunnel for service exposure without open firewall ports
 - Autonomous maintenance of self-hosted infrastructure at 99.9% uptime over 3 years, with automated local and encrypted offsite backups and SMART disk health alerts
 - 17TB storage pool with automated Python rebalancing; Tailscale VPN with secure cross-device remote access; layered security with reverse proxy auth, DNS filtering, and container isolation
 - Dedicated GPU for video transcoding and local LLM inference via Ollama
-

Personal Projects

jeansouza.dev — Personal site and engineering portfolio built with Next.js 16 App Router, React Server Components, Server Actions, and TypeScript. Deployed on Vercel.

Pigui — Personal finance platform in production — web app and native Android app. Web: Next.js 16, React 19, TypeScript, Prisma ORM, PostgreSQL, Vitest + RTL, blue/green deployment on GCP. Mobile: React Native with native push notifications, Firebase, and Google OAuth.

Vi-Ui — Open source Vue component library created at Vitta, documented with Storybook. Foundation of the company's design system. github.com/vitta-health/Vi-Ui

Education & Certifications

Esamc — Graphic Design (Incomplete) · January 2008 – June 2010

EF SET Certificate 82/100 (C2 Proficient) — English proficiency, internationally recognized

Languages

Portuguese (native) · English C2 — EF SET 82/100
